

Access Control Manager System

The Access Control Manager (ACM) system is an IT-friendly Physical Access Control System (PACS) for enterprise-class installations. It's a complete solution that is designed to help you focus on securing your people, property and assets, while giving you the flexibility to respond to alerts whenever you are.

The ACM system is equipped with a full set of standard features and integrates with IT and human resources solutions, reducing the risk of duplicate data entry.

Features

Web Browser-Based ACM	No server or client software to install.
Single-Point Management	Capable of centrally managing a variety of hardware by using one application or integrated feature in the ACM system.
Seamless Integration with Other Systems	Integrates with external identity management systems to combine IT and physical security systems together.
ACM-Ready Hardware	Works seamlessly with physical readers.
Role-Based Access Control	Map permissions roles such as departments, locations and sites with physical access, to enforce policy decisions and event responses.
Custom Reporting	Optimized for usability with features similar to commonly used spreadsheets, settings are modified from day one during system installation, including mapping hardware to the data table.

Enterprise Features

- Event and alarm management
- Detailed web products, images, videos, and synchronization capabilities of access information
- Transit access (temporary cardholder authorization)
- Role-based authorization and policy enforcement
- Graphical floor plans and maps
- Working emergency testing and handling
- Priority door action
- Hardware configuration templates
- Hardware status dashboard
- Overview
- Database, wireless tools, and browser panel integration
- User event management and video verification with Avigilon Control Center[™] software integration
